1         NB 50-160/177 AF2ABQQE           Product No: 98158393         Product No: 98158393           Non-self-priming, single-stage, centrifugal volute pump designed according to ISO 5199 with dimensions and rated performance according to IS 733 (10 bar).           Flanges are PN 16 with dimensions according to EN 109-2. The pump has an axial suction port, radial discharge port, horizontal shaft and a back pull-cut design enabling removal of the motor, motor stool, cover and impeller without disturbing the pump housing or pipework.           The unblanced rubber belows seal is according to DIN EN 12756.           The pump is close-coupled to a fan-cooled asynchronous motor.           The problanced rubber belows seal is according to DIN EN 12756.           The pump is close-coupled to a fan-cooled asynchronous motor.           The problanced rubber belows seal is according to DIN EN 12756.           The problex minimum efficiency index (ME) is greater or any or 2007. This is by the Commission Regulation (EU) considered as an indicative benchmark for best-performing water pump available on the market as from 1 January 2013.           The back pull-out design means that the pump can be serviced by a single person without disturbing the pump housing or pipes. <b>Cast-iron</b> parks have an epoxy-based coating made in a cathodic electro-deposition (CED) process. CED is a high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface. <b>Pump</b> The pump housing has both a priming and a drain hole closed by plugs. The impeller is a closed			Date:	12/08/2021

The pump cover is provided with a manual air vent screw for venting of the pump housing and the shaft seal chamber. The pump is fitted with an unbalanced rubber bellows seal with torque transmission across the spring and around the bellows. Due to the bellows, the seal does not wear the shaft, and the axial movement is not prevented by deposits on the shaft. Primary seal: <ul> <li>Rotating seal ring material: silicon carbide (SiC)</li> <li>Stationary seat material: silicon carbide (SiC)</li> <li>This material pairing is used where higher corrosion resistance is required. The high hardness of this material pairing offers good resistance against abrasive particles. Secondary seal material: EPDM (ethylene-propylene rubber) EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils. The pump housing has feet. </li> </ul></li></ul>							
<ul> <li>high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface.</li> <li><b>Pump</b> The pump housing has both a priming and a drain hole closed by plugs. The impeller is a closed impeller with double-curved blades with smooth surfaces. The impeller is statically balanced according to ISO 1940-1 class G6.3 and hydraulically balanced to compensate for axial thrust. Wear rings used in pump housing and for impeller are made of bronze/brass. Motor stool and pump cover are made of cast iron (EN-GJL-250). Coupling guards are fitted to the motor stool. The pump cover is provided with a manual air vent screw for venting of the pump housing and the shaft seal chamber. The pump is fitted with an unbalanced rubber bellows seal with torque transmission across the spring and around the bellows. Due to the bellows, the seal does not wear the shaft, and the axial movement is not prevented by deposits on the shaft. Motor		The pump nousing has leet.					
		Motor					

		Date:	12/08/2021			
Description						
The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. Electrical tolerances comply with IEC 60034.						
The motor efficiency is classified as IE3 in accordance with IEC 60034-30-1.						
The motor does not incorporate r can be manually reset. The moto (I1/1).	notor protection a r-protective circui	nd must be connec t breaker must be s	ted to a motor-protective circuit breaker which et according to the rated current of the motor			
The motor can be connected to a Grundfos CUE offers a range of the second secon	n variable speed d variable speed dri	rive for adjustment ves. Please find mo	of pump performance to any duty point. ore information in Grundfos Product Center.			
Further product details						
Technical data						
Controls:						
Frequency converter:	NONE					
Pressure sensor:	Ν					
Liquid:						
Pumped liquid:	Water					
Liquid temperature range:	-25 120 °C					
Selected liquid temperature:	20 °C					
Density:	998.2 kg/m³					
Technical:						
Pump speed on which pump data	a are based: 14	65 rpm				
Rated flow:	46.68 m³/h					
Rated head:	9.698 m					
Actual impeller diameter:	177 mm					
Nominal impeller diameter:	160					
Shaft seal arrangement: Code for shaft seal:	Single BQQE					
Curve tolerance:	ISO9906:2012 3	B2				
Bearing design:	Standard					
Materials:						
Pump housing:	Cast iron					
	EN-GJL-250					
	ASTM class 35					
Wear ring:	Brass					
Impeller:	Cast iron					
	EN-GJL-200					
Shaft:	ASTM class 30 Stainless steel					
	EN 1.4301					
	AISI 304					
Internal pump house coating:	CED					
Installation:						
Maximum ambient temperature:	55 °C					
Maximum operating pressure:	16 bar					
Pipe connection standard:	EN 1092-2					
Size of inlet connection:	DN 65					
Size of outlet connection:	DN 50					

Pressure rating for connection:

PN 16
