Tender text

High-efficiency in-line pump with EC motor of energy efficiency class IE5 in accordance with IEC 60034-30-2, hydraulics with minimum efficiency index MEI ≥ 0.7 and electronic power adjustment with a glanded pump design. The pump is configured as a single-stage low-pressure centrifugal pump with flange connection and mechanical seal. The **Stratos GIGA2.0-I** has been predominantly designed for pumping heating water (acc. to VDI 2035), chilled water and water-glycol mixtures without abrasive substances in heating, air-conditioning and cooling systems.

Design ...-R1:

> Single-stage low-pressure centrifugal pump with one-piece shaft in monobloc design

> Spiral housing in in-line design (suction and discharge ports with the same flanges in a line)

> PN 16 flange – in accordance with EN 1092-2

> Pressure measuring connections (R 1/8) for retrofitting of a differential pressure sensor (version ...-R1 without differential pressure sensor)

> Pump housing and motor flange with cataphoretic coating as standard

> Mechanical seal for pumping water up to Tmax. = +140 °C. A glycol admixture of 20 % to +40 % by volume is permitted up to T ≤ +40 °C. An alternative mechanical seal must be provided in water-glycol mixtures with glycol proportions > 40 % up to max. 50 % by volume and a fluid temperature of > +40 °C up to max. +120 °C or fluids other than water. When using water-glycol mixtures, the use of an S1 variant with a corresponding mechanical seal is generally recommended.

> Connection voltages:

>> 3~440 V ±10% 50/60 Hz; 3~400 V ±10% 50/60 Hz; 3~380 V -5% +10% 50/60 Hz

>> Version M-: 1~220 V – 240 V (±10%), 50/60 Hz

> Compliance with electromagnetic compatibility without additional measures

>> Interference emission for residential environment according to EN 61800-3:2018

>> Interference immunity for industrial environments according to EN 61800-3:2018

Control modes:

> Constant speed **(n-const.)**

> Constant temperature **(T-const.)**

> Constant differential temperature **(dT-const.)**

> User-defined **PID** control

> Only possible with differential pressure sensor:

>> Permanent, automatic power adjustment to system requirements without setpoint specification **Wilo Dynamic Adapt plus** (factory setting).

>> Needs-based volume flow optimisation of the feeder pump through connectivity and communication between multiple secondary pumps **(Multi-Flow Adaptation).**

>> Constant volume flow **(Q-const.)**

>> Variable differential pressure **(dp-v)** with the option to set the nominal duty point Q and H

>> Constant differential pressure **(dp-c)**

>> Differential pressure control (dp-c) to a remote point in the pipe network **(index circuit evaluator)**

Functions:

> Selection of the field of application in the **setting assistant**

> **Operating modes of twin-head pump: Main/standby operation**

> **Switchover** between **heating and cooling mode** (automatic, external or manual)

> Ability to save and restore configured pump settings **(3 restoration points)**

> **Fault and warning messages** shown in plain text with advice on resolving the issue

> Integrated **full motor protection**
